

HOW TO: Enable USB Audio Streaming for Android Jelly Bean (4.1+) and newer on GROM-USB2P and GROM-AND2

Please follow these simple steps:

STEP 1

Make sure you have USB2P or AND2 unit and supported Android device (*Android 4.1+*)

STEP 2

Make sure to update to the latest firmware here:

<http://www.gromaudio.com/software-usb2.html>

STEP 3

After the update, check the version:

To check FW version installed do the following:

- Switch to GROM mode (CDC or SAT) with USB stick attached*
- Take the USB stick out*
- Track number is the firmware version*

STEP 4

Download config file below (**right click and "Save Link as..." on your USB stick**) and place on USB Flash Drive already setup to play music through USB flash drive when connected to GROM.

<http://gromaudio.com/aaling/download/gromusb2.cfg>

STEP 5

Attach stick to the GROM unit once you hear music play through GROM mode. Config should have been successfully loaded if setup properly. Note: Config settings will be saved until the next power reset of the unit.

STEP 6

Attach your supported Android phone to the GROM unit and start any audio app while GROM is active.
